

HERE IS WHAT YOU CAN EXPECT WITH ABR INDUSTRIES COAX CABLE ASSEMBLIES:

- Adhesive Lined Weatherproof Heat Shrink Tubing on both connector ends.
- All cable assemblies are Hi-Pot and Continuity tested.

At ABR Industries, all our coaxial assemblies are 100% tested and inspected prior to shipment. A Hi-Pot test (per MIL-STD-202 M301) ensures electrical integrity and a continuity test looks for opens and shorts. We also perform a visual and mechanical inspection for length, label information and workmanship.

- All PL259 assemblies (not bagged) have the ABR Industries special "Green" caps.

It's just our way of giving you the green light that our coax cables are ready to go.

Here is a chart for loss at different frequencies.
